Example

Match each set of ordered pairs with its mapping diagram.

Which table represents a function and how do you know?

A **function** is a rule for taking each input value and producing exactly one output value.

Got It?

Name the set of ordered pairs represented by the mapping diagram.

Example

Which relations are functions? Use a mapping diagram to explain your reasoning.

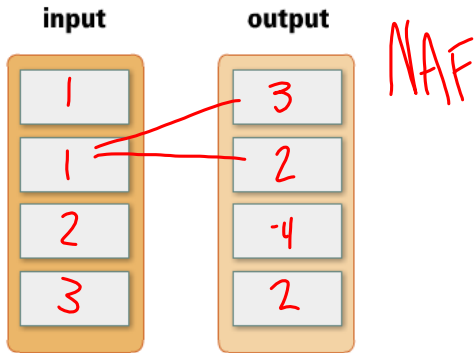

- a) $\{(0, 1), (1, 4), (2, 5), (3, 7)\}$
- b) $\{(-2, 0), (-1, 0), (0, 0), (1, 0)\}$
- c) $\{(0, -1), (0, 3), (1, 2), (3, 2)\}$

Got It?

Is the relation a function? Use a mapping diagram to explain your reasoning.

$\{(1, 3), (1, 2), (2, -4), (3, 2)\}$

Example

Is each relation a function? Explain.

NAF

input	output
1	3
1	2
2	-4
3	2

Function

input	output
-3	-5
-2	-5
-1	-5
0	-5

Function

input	output
0	12
1	14
2	16
3	18

Got It?

Is the relation a function? Explain.

input	output
-5	-5
-3	-3
1	1
2	2

Function

Watch Part 4 Video

Example

Use the vertical line test to determine if each graph represents a function.

Function
